PROJECTS

Fake News Detection System

- Engineered a machine learning pipeline with TF-IDF vectorization + Logistic Regression.
- Optimized model serialization and deployment workflow using pickle-based model loading.
- Conducted error analysis to identify misclassification patterns.

Movie Recommender

- Developed a content-based movie recommendation system using cosine similarity on metadata features
- Engineered feature vectors from genres, keywords, cast and directors to optimize relevancy of suggestions.
- Implemented data preprocessing to improve similarity accuracy and enhance model performance.
- Deployed the system with an interactive interface to allow users to explore personalized recommendations.

Finance Tracker

- Developed a fully functional personal finance management web app using ReactJS, Recharts and LocalStorage to track income, expenses, categories and transaction history.
- Implemented CRUD operations (add, update, delete) with persistent storage to optimize data management and ensure seamless user activity even after page reloads.
- Designed dynamic financial analytics including category-wise Pie Chart visualization.
